**GASOLINE DISPENSING OPERATIONS (GDO)
 ANNUAL EMISSIONS INVENTORY FORM**

(DO NOT INCLUDE DIESEL USAGE)

Source ID (Permit) Number: _____ **Reporting Year:** _____

Company Name: _____

Source (Facility) Name: _____

Source (Facility) Address: _____

City, State, and Zip: _____

Mailing Address: _____

(If different than facility address) _____

	Gasoline in gallons	E85 in gallons
1. Annual throughput for all grades of gasoline and E85: (Note: Do not include kerosene products, i.e., diesel or jet fuel)	_____	_____
2. Method of Measurement:	_____	_____
3. Type of Vapor Recovery System (none, Phase I only, Phase I & II)	_____	_____
4. Actual volatile organic compound (VOC) Emissions (tons/year): (Note: If you are completing this form manually, refer to the directions on Page 2)	_____	_____ tons/year
5. Actual hazardous air pollutants (HAP) emissions (tons/year):	_____	_____ tons/year

I certify that, based on information and belief formed after reasonable inquiry, the information contained in this document is true, accurate and complete.

Signature of Responsible Official _____
Signature Date

Responsible Official Print Name and Title: _____

Phone Number: _____ Cellular Number: _____

Responsible Official Email Address: _____

Please complete this form to the best of your knowledge electronically. Submit the completed report with the Responsible Official's original (wet) signature to the Division of Air Quality by mail or in person at the address listed above.

Directions for completing the form manually:

- Method of Measurement – Select one of the items listed in the dropdown box.
- Actual VOC emissions (tons/year) = Actual throughput in gallons multiplied by **0.0000021** if the facility has both Phase I and II controls,
- Actual VOC emissions (tons/year) = Actual throughput multiplied by **0.000003** if the facility has only Phase I control.
- Actual VOC emissions (tons/year) = Actual throughput multiplied by **0.0000065** if the facility has no controls.
- Actual HAP Emissions (tons/year) = 5.2% of the actual VOC emissions

Example Calculations:

Actual gasoline throughput (dispensed) in the reporting year = 1,000,000 gallons

Example of Phase I and II calculation:

VOC Emissions if the facility has both Phase I and II controls = 1,000,000 x 0.0000021
= 2.10 tons/year

HAP Emissions = 2.10 x 0.052 = 0.11 tons/year

Example of Phase I only calculation:

VOC Emissions if the facility has only Phase I control = 1,000,000 x 0.000003
= 3.00 tons/year

HAP Emissions = 3.00 x 0.052 = 0.16 tons/year

If you have any questions or need clarification on completing this form, please contact Air Quality at (702) 455-5942.
