RE: DESERT CONSERVATION PROGRAM PROJECT COMPLETION NOTIFICATION:
BUTTERFLY MONITORING AND INVENTORIES
2005-PINYON—570C

The work for the above referenced project has been completed. Please see the attached for all project related information.

The purpose of the above referenced project was:

To develop and implement a strategy to estimate butterfly relative abundance for the Mt. Charleston Blue butterfly (*Plebejus [Icaricia] shasta charlestonensis*) and the Spring Mountains Checkerspot (*Chlosyne acastus robusta*) at specific sites over a two year period and identify and map potential butterfly habitat within target areas. The population monitoring and habitat mapping will contribute to understanding of the range, distribution, and temporal changes associated with these rare endemic butterfly species.

The major accomplishment or findings of this project include:

Surveys for the Spring Mountains Checkerspot and the Mt. Charleston Blue butterfly were completed for 2010 and 2011 field season. Species reports were submitted. For the Mt. Charleston Blue butterfly, between 2010 and 2011, there was an observed decrease in numbers and in the occupied habitat area. For the Spring Mountains Checkerspot in 2010, only two adult Checkerspot were observed during the survey. In 2011, the most Spring Mountains Checkerspot observed in one day/survey repetition was 13 on July 1. Numbers on the six other days/survey repetitions ranged from two to twelve.

Habitat assessments were performed for both the Spring Mountains Checkerspot and the Mt. Charleston Blue butterfly. The assessments identified additional habitat for the rare Spring Mountain butterflies, including Mt. Charleston Blue butterfly habitat and potential colonies that could be part of the South Loop Trail subpopulation.
