Discontinuance of SWPPP Permit Requirements

Beginning December 1st 2020, there will be an update to the policy in regards to SWPPP permits submitted to Clark County Public Works Construction Management-Development Division. The requirement to submit for a SWPPP permit through Clark County Public Works Construction Management-Development Division in relation to Encroachment Permit work activities will no longer be necessary. It has been determined through extensive review with multiple divisions that the typical nature of work permitted through Clark County Public Works Construction Management-Development Division does not require the issuance of an additional SWPPP permit. Be advised that although a SWPPP permit is no longer required, contractors are still required to maintain Best Management Practices while excavating/working within Clark County right of way in accordance with all Local, State, and Federal law.

Be advised that all previously approved SWPPP permits will continue to be enforced by inspection staff. All previously approved permits must be kept active, while work is ongoing and properly closed out when construction activities are completed and the related Encroachment permit is ready for close out.
